

Express comparison n° 1: Interest of current regulation embedded into TPL VISION products

Evidence in video:

2 products with similar aspects,
but not using same current regulation :

In machine vision, there is no universal solution.
Be bright, choose an expert.

When we specify that our products should be powered with 24 VDC +/- 10 %, it means that TPL Vision lightings will endure between 21.6 V and 26.4 V power supply with no impact on illumination.

However, every led lighting for Machine Vision, does not have those features.

Let's submit your applications too, for free !
